

Stop breaches at the **Endpoint**

Modern cyberattacks most commonly begin at the endpoint. Laptops, servers, mobile devices and cloud workloads now represent the primary attack surface for ransomware, credential compromise and advanced adversaries. Their protection has escalated to a board-level priority and are tied directly to operational resilience and enterprise risk.

Our Endpoint Security solution combines world-class technology with expert-led implementation, monitoring and response, delivered by Red Helix and powered by the CrowdStrike Falcon platform.

The Board-level challenge

Ransomware, credential compromise and advanced adversaries target endpoints as their primary entry point. Once inside, attackers move laterally, escalate privileges and disrupt operations. Downtime, regulatory scrutiny, insurance implications and stakeholder confidence loss all contribute to the rapidly escalating financial and reputational impact on an organisation.

Strategic response: Shift from reactive detection to proactive prevention

Traditional tools generate alerts. Modern security must prevent breaches. The CrowdStrike Falcon platform identifies Indicators of Attack in real time using behavioural AI and global threat intelligence, to stop both known and unknown threats before they spread. Prevention, detection and response are unified within a single cloud-native platform, reducing complexity while increasing speed and clarity for security teams.

Helix**

Measurable business impact

Reduced Likelihood of a Breach: AI-driven prevention significantly lowers ransomware and advanced attack risk.

Faster Containment: Immediate isolation minimises operational disruption and financial exposure.

Lower Operational Strain: Automated prioritisation reduces alert fatigue and improves SOC efficiency.

Improved Compliance Posture: Comprehensive endpoint visibility strengthens audit readiness and insurer confidence.

Cyber resilience as a strategic advantage

Endpoint security is now a core component of enterprise risk management, not just technical control. CrowdStrike and Red Helix partner to provide the intelligence, visibility and response capability required to safeguard operations, protect stakeholder trust and enable secure growth.

***Protect the endpoints. Protect the business. Protect the brand.
AI-native. Cloud-delivered. Built to stop breaches.***
